TermiGram: SSH terminal and SFTP inside Telegram

Posté par TermiGram - le 27 Septembre 2026 à 00:02

_____

Need to check a server when you're away from your desk?

We're building TermiGram, an SSH terminal and SFTP file manager inside Telegram.

Run commands, manage remote files and switch between open workspaces. Keep server profiles, SSH keys and command snippets ready for your next session. Share Links and built-in proxy routing are also available.

See the app and try it with a server you manage:

termigram.com/

We'd like to hear which server task you'd try first.
